FEATURES

Our vivariums & cabinets display a variety of features which make them stand out from the rest. Look out for the symbols below on each page of our brochure to see which features each product includes:

TOUGHENED GLASS

All the glass used in our vivariums is toughened to BS6206A kite marked standards. This means it has up to 5 times its original strength and, if broken, the glass breaks into small blunt fragments. Normal plate glass, if damaged, breaks into sharp long shards. As the glass is used as sliding glass doors it is crucial that only safety glass is used to prevent serious injury. We aim to conform to BS EN 14072:2003 for glass used along with furniture.

VENTILATION

Each vivarium contains the correct number of vents to provide optimum temperature and humidity levels. 65mm circular vents are positioned at both the top and bottom of the back panel allowing a steady flow of air throughout the vivarium. Each vent contains a plentiful number of holes which are big enough to allow air to flow in and out, but small enough to prevent live foods from escaping.

FOREST STEWARDSHIP COUNCIL

All our timber comes from recycled sources or FSC sustainable forests. The FSC product label allows consumers worldwide to recognise products that support the growth of responsible forest management worldwide. Environmentally appropriate forest management ensures that the harvest of timber and non-timber products maintains the forest's biodiversity, productivity and ecological processes.

EASY TO ASSEMBLE

All units are designed with as few parts as possible for quick and easy assembly.

SOLID BACK

We believe that 3mm hardboard is not suitable for a professional vivarium. Its low compression structure and paint or foil surface means a very short product lifespan. This is why we use the same robust board for all panels. When sealed, our construction lasts many years longer than cheaper competitors. After all our panels are 5 times thicker!

CABLE ACCESS POINTS

Outlet points have been formed in the edge of the back panel for cable management. Any size of plug or fitting can easily pass through prior to securing the lid. To remove cables or replace, simply loosen the cams and lift the lid. Cable access points are located at each end, along the top. Either point can be easily closed with silicone if not required.

DEEPER

If your reptiles require lots of floor space to move around, look out for our vivariums with this feature displayed. All of these vivariums have a depth of at least 47cm, giving your reptile plenty of room to stretch out.

ELDMAU BEECH

This classic favourite is a popular choice for many modern interiors. The warm yellow tones in Ellmau Beech help brighten up any household, perfect for hobbyists with an eye for design.

TOBACCO WALNUT

Elegant and timeless, Tobacco Walnut reflects the latest interior design trends with its dark warm undertones. This woodgrain is highly regarded for its subtle sophistication.

LIGHT WINCHESTER OAK

For a more traditional look why not try Winchester Oak, a natural looking decor with distinctive characteristics. With its knots and swirling grain, this colour looks great against any background.

VX VIVARIUMS & CX CABINETS

The standard VX 'terrestrial' vivariums are available in 3 different sizes and 3 different colours, all 47 cm deep and 52.5 cm tall. These vivariums are suitable for most common reptiles which require plenty of ground space. Each vivarium has a matching CX cabinet to help lift the vivarium up and really make it look like a piece of furniture.

AX DIVIDERS

If you have more than one reptile, why not split your AX vivarium into two separate habitats using our new AX divider. This wooden panel attaches inside the vivarium behind the centre rail, creating two habitats, one terrestrial and the other arboreal.

AX 36 Divider	PT3948	-	-
AX 48 Divider	PT3951	-	-

EX VIVARIUMS & CEX CABINETS

The EX range are the 'large terrestrial' vivariums. These are suitable for bigger reptiles which need plenty of floor space to move around. They are deeper than the standard VX range and come in 122 cm. A CEX cabinet is available, giving plentiful storage space for all your vivarium related products.

MODX VIVARIUMS

91.5 cm long vivarium modules which join together to make a vivarium as long as you please. As well as being the perfect solution to creating a large vivarium, it also has the added benefit of being able to extend as your reptile grows.

STACKING & SHOPFITTING

Our vivariums can be stacked on top of one another, providing increased housing for reptile enthusiasts and retailers. To help lift the vivariums off the ground, we supply stylish silver feet which easily attach to the underside of the vivarium.

We recommend you use the following number of feet on each of our vivariums:

4 FEET - VX24, AX24, LX24 & LX36
6 FEET - VX36, VX48, AX36, LX48, MODX24
8 FEET - EX48, EX55, AX48, MODX36

COMING SOON

A new adjustable silver foot will soon be available. The height of the foot can be altered, helping to keep your vivarium level. This is particularly useful for uneven floors. These again will be available in packs of 2.

2 Pack feet for stacking
