Introducing Fluval Fresh Water Aquarium Sets

Bring a contemporary touch to your fresh water aquarium with the new Fluval Fresh Aquarium sets

The new Fluval Fresh aquarium has been designed to create a clean, modern aquarium that will enhance your environment, working in harmony with your decor. With a choice of three sizes, each with co-ordinating cabinets, the Fluval Fresh collection has something for everyone.

Stylish simplicity

The lush plants and freshwater species are the stars in these aquaria, framed within high quality machine cut glass that is finished perfectly with a frosted rim and elegantly sat on a beautifully styled Bolo and Mussel cabinet that will compliment any living space.

A size for any space

With three size options from 58L (38cm wide) to 129L (90cm wide) Fluval Fresh appeals to beginners and advanced marine aquarists alike and will create a talking point in any room.

The complete solution

Fluval Fresh aquarium sets are filled with everything you need to create a healthy, clean home for your fish. Contents include a Fluval canister filter, Nano LED lamp or LED light strip and a Fluval heater.

Creating a Fresh Water Aquarium Bursting with Vibrancy

In creating the aquarium, highly skilled aquarists have produced the ultimate freshwater environment boasting current modern styling with ease of use and convenience.

Fluval Fresh aquariums feature the new and innovative "EasyConnect" system, which allows the direct connection of the tank to the external filter through the bottom glass by means of special fittings. Normally, the same type of connection is achieved through specially-made devices, which are complex and require the intervention of expert technicians. On the contrary, in a few minutes the EasyConnect system can be easily and safely installed, giving your aquarium the most professional and clean solution.

These integrated filtration fittings deliver ultra quiet performance; consistent water quality; no external hosing; reduced electrical wire clutter and more.

The Fluval Fresh aquarium is equipped with Fluval Performance LED lighting tastefully suspended by sleek brackets connected to the rear of the aquarium. These high efficiency

lighting systems have been engineered with Multi LED technology for powerful spectral performance that will drive lush plant growth while providing accurate pleasant viewing.

To finish the look, the Fluval Fresh sits beautifully on the simple, clean design of its cabinet, featuring enhanced 'push to open' doors; this means no handles to spoil the look.

Fluval Fresh aquarium sets are available now in most good aquatic stores.
