Exo Terra Dripper Plant

The Exo Terra Dripper Plant supplies a continual supply of cascading water droplets, attracting even the most reluctant reptile to drink, housed within a realistic plant design.

Designed to meet the needs of Chameleons and other tree dwelling reptiles and amphibians, the Exo Terra Dripper Plant stimulates the reptiles' natural drinking behaviour helping prevent illnesses related to dehydration, whilst improving your animal's overall health.

Placed in a water bowl, dish or reservoir, the Dripper Plant's pump gently recycles and pushes the water up the plant stem and creates a cascade of water drops. The leaves of the Dripper Plant then guide the droplets back into the water reservoir to prevent spilling.

“Many amphibians generally do not recognise motionless sources of water; instead they drink from moving dewdrops and raindrops. The Exo Terra Dripper Plant is as close to the real thing as possible; with realistic succulent and waxy leaves, it creates the perfect drinking resource to stimulate natural drinking behaviour in your reptile,” said Emmanuel Van Hegen, Exo Terra Global Brand Manager.

The Dripper plant comes complete with a pump and reservoir and measures 55cm tall.
