Exo Terra Day & Night LED Light

The new Day & Night LED light from Exo Terra is a convenient and energy efficient day and night light ideal for reptiles and amphibians with no UVB requirements.

The low energy lighting device contains bright white LEDs to mimic sunlight with the ability to switch to the night light at the touch of a button, creating a night time atmospheric blue light with natural temperature drops you would experience in the wild.

Ideally suited to snakes, nocturnal geckos, frogs, newts, salamanders, spiders and scorpions, the Day and Night light is the most convenient and energy efficient way to illuminate your terrarium, allowing you to observe your reptile's adventures without disturbing their natural behaviour.

Conventional light bulbs waste more than 80% of the used energy in the form of heat, whereas the Exo Terra Day & Night LED illuminates your terrarium with a minimum of heat and a maximum of light output reducing the risk of overheating in the warm summer months.

The longevity of the LED light also means they consume less energy and have a longer lifespan compared to conventional incandescent and fluorescent light bulbs meaning fewer replacements which inevitably delivers money saving benefits.

The Exo Terra Day & Night Light is available in 2 sizes: 15 LED and 24 LED.
